

Methyl acetate:

Methyl acetate is a chemical compound that is also known as Dimethyl carboxylate ester. Methyl acetate is used as an important chemical in various industries. It is used for many of the same applications and is often used as a substitute for acetone.

Structure:

Specifications:

Parameter	Spec.	UNIT
IUPAC Name	Methyl acetate	---
CAS No.	79-20-9	---
Molar mass	74.079	$\text{g}\cdot\text{mol}^{-1}$
Description	Colorless Liquid	Visual
Density @ 15 °C	0.932	g/cm^3
Boiling Point	56.9	°C
Solubility in Water	25 (at 20 °C)	%

Applications:
